Provided Services Value

AUD \$107,000

Project Period

Oct 2019 to Dec 2019

Technology Partners

Logitech
Extron Australia
LG Electronics

THE BRIEF

Integration - A leading technology services provider required assistance with delivering a range of integrated presentation and meeting systems to their client.

Deployment - Hart Automation was engaged during the tendering process to ensure compliance with the AV specification, providing industry certifications and costing for all services.

Management - The Hart team would assume responsibility for delivery of the entire project, working closely with the end-client, the construction team and technology partners to ensure a positive outcome.

OUR SERVICES

- Several requirements detailed in the tender specification were met by utilising Hart Automation's extensive industry certification framework.
- Service provision included design validation & drafting, stock management & logistics, project management, site management & installation, control systems programming, commissioning, witness testing, handover, and defects liability.
- Once the project was awarded, the Hart team immediately began deployment. Award of the AV tender was delayed until after the scheduled commencement date, requiring the delivery process to be accelerated.
- All spaces (23 in total) were installed and tested within a 2-week window, closely coordinated with the construction team and the end-client's IT department.
- Hart Automation maintained responsibility for witness testing, handover, preparation of operation and maintenance manuals, as-built documentation, submission of equipment schedules and defects liability.
- Several variations were scoped, costed and delivered by Hart due to changing requirements of the end-customer.
- Hart Automation remained transparent during the entire project lifecycle, proudly working as an extension of our client.
